

CLAIM:

I claim:

1. The improvement of an electrical connector plug used to connect electrical cords to a jack of a telephone, computer, other electronic device or other terminal housing wherein the improvements comprise of:
 - (a). a pivoting lever which is not formed integrally with the electrical connector plug housing, but is attached thereto,
 - (b). a front end of the electrical connector plug housing which forms a barrier against the pivoting lever thereby acting as a stopper when the lever is released from compression,
 - (c). a matter of opposing force connected or held in place to the pivotal lever, the housing itself or both lever and housing.
